Call video software

The best video editing software could be the difference between a nice project and a fight that melts the eyes. That's why we've put together the best video editing software for Mac, Windows, iOS and Android, among others, so you can find the ultimate tool for you. From professional publishers to movie lovers, there's something that works for every level. There is also, as you can imagine, a price range of pretty expensive premium stuff all the way to a totally free video editing software. Whether you want easy video editing or just the best free option, then will be something in this wide list of the best options out there right now. (If you're working with still images, explore our overview of the best photo editing apps.) From cutting clips and applying filters to working with green screens and adjusting playback, there are plenty of features to look out to decide what is the best video editing software for you. You can be part of the Adobe team - a big player in the video editing software space, with some excellent dedicated apps available via a Creative Cloud subscription. Alternatively, you may be more open to trying out some lesser known names that offer great experience for a lower price. We have the best video editing software here, each organized by what they offer, which stands out. You should be able to find the right tool to create your next video artwork right here. (Image credit: Adobe) The best title video editing software must go to one of the oldest players in the game: Adobe, with its latest Premiere Pro CC. As the name suggests, this is the do-it-all tool that professionals use to create high-end videos. As such, it's not cheap, paid for on a subscription model. If you're just editing video, you can opt for the single application plan, but if you're doing other creative tasks, you'd better plump up for a full Adobe Creative Cloud subscription. No matter what you want, Premiere Pro CC offers everything you could want, from basic cutting and overlaying up to 8K and 360 degrees of video editing support - assuming your machine has the power to run this. It works on both Mac and Windows and is filled with keyboard shortcuts to help make the process easy to use. There is also an option to download directly to YouTube, making it a one-stop shop for all self-publishing social media video manufacturers out there. Subscribe to Adobe Creative Cloud (Image Credit: Future)The best video editor for MacFinal Cut Pro X is simply the best video editing software you can get on Adobe options are great too, but it's built by Apple, for Apple. So, as you would expect, it is super clean, minimal and as such easy to use. But that doesn't mean it scrimps on features - far from it. This software offers a lot of features to justify the high price. These include special effects, aggregation tools, audio addition and editing, as well as multi-camera editing and intelligent color-balancing tools. You also have access to Video tracks so you should never feel tightened up. With a free 30-day trial, it's definitely worth giving this powerful video editing tool a try. (Image credit: Adobe) The best software for full editing that suits all usersAdobe Premiere Elements is the second Adobe software on the list in just three so far. Yes, Adobe is so good. This video editing suite offers a more affordable and easy-to-use alternative that is filled with useful features like facial recognition, to name a few. The simple but really effective features we love include video stabilization, automatic motion tracking, audio effects and a selection of standard soundtracks. The fact that it is all easy to use is just a great bonus. If you're working with a lot of people-based videos, then smart toning is a great feature for the skin - much like how a selfie camera makes you look smoother skinned. This gives the videos a more professional finish. And for the pros, you can enjoy effects such as chroma-keying, opacity, transitions and more. Something for everyone then. (Image credit: Lightworks) If you are looking for the best free video editing software, we recommend Lightworks. This software is good enough to get you professional quality videos without charging you pro-grade prices. The hidden cost? It's not quite as easy to use as some of the above options, but if you put in the effort to learn, it can be as effective. Import and return background footage and preview real-time video effects-some seriously high-end features you can't expect to see in a free tool. Set custom keyboard shortcuts to speed up the work process and take advantage of multi-track editing for complex end results. There is the opportunity to spend some money and upgrade to Lightworks Pro, which will allow you to export projects to different formats and enjoy features like 3D modeling and directly on YouTube downloads. (Image credit: Hitfilm Express) The best easy-to-use, free video editorHitfilm Express is another really useful free video editing program that comes with a user-friendly and easy-to-use interface. This makes it a great option for anyone new to video editing who wants to give it a try. That said, it has some decent features for more experienced users too. You can enjoy features such as 3D composition tools, green screen color key setting and create masks Custom. In addition, there are more tools on a day-to-day basis such as clip cutting, color balancing and, of course, exporting to various video formats. The system is fairly simple to use, with a traditional interface that is easily recognizable to anyone who has used video editing tools before. Just make sure you have a machine with a lot of power as this makes your hardware work hard to crunch that data. (Image credit: Adobe) Adobe Premiere Rush is the ultimate mobile editing tool, designed specifically for use on smartphones and tablets. This means you can set this app on fire on your iOS or Android device and edit a video entirely in that app. Application. Your phone or tablet is pretty new, you can even edit high-quality 4K video footage with up to four video tracks and three audio tracks at once. Since it's on your phone is making exporting super simple, with specific options for exporting directly to social media accounts. Anything that can be enjoyed for free using the rush starter plan, with an export limit of three videos. Or pay a nominal fee and enjoy full service right there on your phone or tablet. (Image credit: GoPro) Ideal for editing action camera footageThe GoPro app is a great way to instantly start editing your live action video from a GoPro camera, or any other compatible device for that matter. As this is done to be used quickly, on the move, it is super simple to work. It automatically imports sequences and can create videos synchronized to the music right away, without you have to do much at all. There are more complex options like adding photos or time lapse sequences as well as cool graphics and graphics to express speed - ideal for action camera sequences. Easily share videos on YouTube or Facebook with a great option to browse, frame by frame, to find the perfect image to carry your message. If you pay and subscribe to the GoPro Plus version, you'll have much more than the 20 standard soundtracks and can automatically upload videos and photos to the cloud for editing from any device you want. (Image credit: CyberLink) Best fully featured video editor for beginnersCyberLink PowerDirector is a great option for anyone relatively new to video editing who fancy a full-fledged and complex tool that is also easy enough to get acquainted with. This means features like 8K video editing and 360-degree support, but also super-simplifying tools like an assistant that optimizes video in seconds. It's a great tool for a quick change to bung up on social media in a hurry. But there are more complex features also with a standard post-production interface that includes motion graphics titles, social media friendly 1:1 video reports and high quality video editing. What you'll have to pay extra for, along with the Ultimate version, are features like 4K video editing, audio cleaning and library preview features. (Image credit: KineMaster) The best video editing tool for AndroidKineMaster is a great video editing option for Android, ChromeOS and iOS users with a device new enough to run it. We say that has some seriously complex features that make it pretty good, even for professional publishers to use on the go. You can edit multiple layers with up to four audio tracks in a single project. There are also small extras like the ability to add writing and text annotations and even edit to the frame and sub-frame levels. All that is free, so even if you're not sure that tell us give a go as it will more than likely meet the needs of most even the most demanding editor. (Image credit: Corel) The best video editing software for the beginner TotalCorel VideoStudio Ultimate is a really great video editing option for anyone new to and hacking clips together. Although it may be a bit basic for professionals, this has a lot of features despite how easy it is to pick up and use. This includes high-end extras like 4K, multi-cam editing and 360-degree VR video editing. The interface is easy to retrieve and has a music library as well as a whole host of effects that can be added to your video project. The key here is that the software is intuitive enough to make it easy, but also - crucial - fun, so you can actually enjoy the process of creating the final cut of your video editing. And with over 2000 customizable filters to choose from that gives you a great opportunity to really customize your images to offer something unique fun. Fun.
